(54) LIQUID CRYSTAL DISPLAY DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a liquid crystal display device in which the quality is made to be more dignified and also ghosts or the like are suppressed by preventing fluctuations of a video signal accompanied by potential fluctuations to be generated because lengths of connection wirings connecting wirings for the video signal and analog switches are different when plural analog switches are arranged at positions on the same line in a row direction.

SOLUTION: In this device, the degradation of quality and the generation of ghosts accompanied by the potential fluctuations are suppressed by making channel widths of channels between drains and sources of MOS transistors 26, 27 constituting analog switches 25 to be respectively different in accordance with disagreement of lengths of connection wirings connecting wirings 18 for the video signal and the analog switches 25.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
